# OneStroke Icons

## Look, how small they are!

They're designed with small *and* big sizes in mind. They're easy on the eyes and destinctable, even on small sizes.

48x48    32x32    16x16

## Give me Alpha Baby!

Most of the icons are slightly translucent, so they live in harmony with the background they're placed on (except black, but black is *not* a colour).

## What the..., only 23!?

*Do you want more?*
Then create them *yourself*, and do not forget to contribute back!
They're *publicly* hosted at http://github.com/yuri41/onestroke-icons.
From there you're able to fork them and notify me about something you want to give back!

## ...and the best is:

## They're free

I made them freely available, to make it easier for *you*, to use them. They're under the *Creative Commons Attribution-Share Alike 3.0 License*, which allows *you* to *distribute, edit* and to *use* these icons in your own projects.
